SUNLAMPS & SOLARIUM

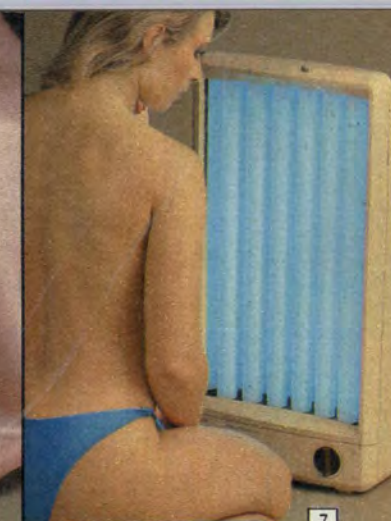

Natural sunlight emits ultra-violet and infra-red rays which are reproduced in sunlamps.

Ultra-Violet Radiation

UVA—(Direct tanning). Tanning is caused by oxidation of pigment already in the skin. Your skin does not turn red but takes longer to tan than by UVB.

UVB—(Indirect tanning). UVB produces a tan by creating new pigment in the skin. There is slight reddening of the skin which disappears and a tan remains. This method provides protection against strong sunlight and is faster than UVA.

Infra-Red Radiation (IR). Infra-red rays penetrate the skin and relax aching muscles and other conditions.
